

Hi Naveen,

Please find the attached sample case study for your practice.

sample case study,

1. Find % of total applicants for each unique value of dependents
2. Find the average number of dependents per applicant
3. Find the %of applications approved for self-employed applicants
4. What is the % of rejections for married male applicants
5. Which property area has the maximum approval ratio
6. Find average dependents per income group
7. Create a simple predictive model to assess whether a loan application will be approved or rejected and provide the accuracy score

Thanks,  
Pawan
